Job Vacancy Available

Marie Skłodowska-Curie actions
Innovative Training Network (ITN-ETN)
"BASE-LiNE Earth"

We invite applications to undertake competitive high-level research on the complex Phanerozoic seawater history through the determination of original proxy information preserved in reliable ancient geological archives like fossil brachiopods using cutting edge technologies and experimental approaches within the Marie Skłodowska-Curie Innovative Training Networks (ITN-ETN) "Brachiopods As SEnsitive tracers of gLobal mariNe Environment: Insights from alkaline, alkaline Earth metal, and metalloid trace element ratios and isotope systems". BASE-LiNE Earth is funded through the HORIZON2020 program of the European Union and consists of 14 full partners and seven associated partners out of 11 countries (Austria, Australia, Canada, Czech Republic, Denmark, France, Germany, Israel, Italy, Poland, Slovak Republic) among them internationally leading researchers in the field of geology, chemistry and isotope geochemistry, marine biology and ecology as well as numerical modelling and engineering.

The project is coordinated at the GEOMAR Helmholtz Centre for Ocean Research Kiel, Germany. BASE-LiNE Earth will run until December 2018.

All positions offered are full-time and fixed term for 3 years. Successful applicants will benefit from training and networking program delivered jointly by academic and non-academic partners. As a result, BASE-LiNE Earth fellows will gain both, research experience and complementary skills such as career planning, communicating science, and management techniques. Researchers will mainly work in their host institution, but they will also have the possibility to visit another BASE-LiNE Earth partner for secondment activities, which could be either in academia or in industry. On completion of their fellowship, successful applicants are expected to be among the future leaders in their respective fields. The Researchers recruited for these positions are expected to be an active part within the BASE-LiNE Earth consortium by participating in network wide activities such as workshops and conferences. The candidate will be part of an international, interdisciplinary team at universities and research institutions, and is expected to attend the actions as announced in the proposal.

In order to strengthen the role of women in science the application of females for an ESR position is strongly encouraged. Handicapped persons with comparable qualifications receive preferential status.

Please submit your complete application (including a CV [max. 3 pages], a letter of motivation for the position and a statement of your research interests [max. 1 page], relevant certificates, plus contact details of at least two referees) to the contact below quoting BASE-LiNE Earth_ESR06. Applications are accepted until the positions are filled, but we intend to conduct a first evaluation by May 31st 2015.
ESR06—PhD position

High resolution isotope and trace element ratios during the Triassic/Jurassic mass-extinction

CONTACT: Adam Tomašovych Slovak Academy of Sciences, Slovakia, e-mail: Adam.Tomasovych@savba.sk

SHORT DESCRIPTION: This project will focus on the documentation of temporal and spatial changes in temperature and seawater chemistry across the Triassic/Jurassic boundary (~200 Million years ago). This particular time is characterized by one of the largest mass extinctions of marine species during the Phanerozoic. We will use brachiopod shells as archive and determine trace element ratios, stable ($\delta^{18}$O and $\delta^{13}$C) as well as traditional and non-tradition isotope systems ($\delta^{11}$B, $\delta^{26}$Mg, $\delta^{44}$/40Ca, clumped isotopes $\Delta_{47}$) in order to gain marine environmental proxy information. Spatially the study will focus on stratigraphic sections in the Northern Calcareous Alps and in the Carpathians.

FULL JOB DESCRIPTION

This PhD project will focus on a multi-proxy approach tracing past changes in temperature and seawater chemistry across one of the major mass extinction events at the end of the Triassic and during its recovery during the Jurassic. The project will primarily focus on temporal changes in the trace elemental composition (Mg/Ca, Sr/Ca), in stable isotope ($\delta^{18}$O, $\delta^{13}$C) and in traditional as well as non-traditional stable isotope systems ($\delta^{11}$B, $\delta^{26}$Mg, $\delta^{44}$/40Ca, clumped isotopes $\Delta_{47}$) of brachiopod shells. Latter approach intends to constrain the thermal history, continental weathering, climate change and the chemical composition of sea-water during the extinction and its aftermath. During the first part of the project stratigraphic sections in the Northern Calcareous Alps and in the Carpathians will be logged and sampled, and brachiopod samples will be screened for preservation and the degree of diagenetic preservation. Well preserved samples will be prepared for different types of analyses, including intra-shell variations in trace elements and isotope ratios. Molluscs and foraminifera will also be subjected to geochemical analyses in case brachiopods are missing in certain stratigraphic sections. Brachiopods from multiple stratigraphic intervals of the Jurassic and the Triassic will be analyzed for trace elements and isotopes to allow better understanding of long-term changes in space and time as well as latitudinal and bathymetric variations.

The project will be performed at the Geological Institute, Slovak Academy of Sciences in Bratislava, and will also use laboratories and analytical facilities of its Institute in Banská Bystrica, including the stable isotope laboratory, an electron microprobe, and Raman spectroscopy. Study and secondment activities at other institutions linked to the BASE-LiNE Earth project will result in fostering tight collaborations amongst the BASE-LiNE Earth nodes.

Qualifications:

As a successful candidate you should have

- A MSc degree in a relevant field such as geology and paleontology
- The ability to work in an internationally-oriented environment
- A broad interest in geosciences, and the willingness and capacity to work independently
- The willingness to travel
- Basic statistical skills and willingness to work with quantitative data
- You should be fluent in oral and written English, since the host group is highly international in composition and publication aims

Employment conditions:

The position is offered for three years full-time position, starting summer/ autumn 2015. In accordance with the Marie Skłodowska-Curie rules, the salary will be calculated as follows:

Annual salary: ~38.000 €* plus in case of family obligations** additionally 6000,-€.

* This amount is based on the relevant budget concerning the employment of the EU-Researcher. After deduction of the employer’s social insurance share, it amounts to the gross salary for the activity.
Employees gross salary includes taxes, social security, insurance, pension summing up the following:

1. The Living Allowance is a gross EU contribution to the salary costs of the researcher, calculated individually for each European country. "The net salary results from deducting all compulsory (employer/employee) social security contributions as well as direct taxes (e.g. income tax) from the gross amounts. The final amount will not change during the secondment activities. The primary host will ensure that the researcher is covered under the social security scheme. During the secondment the social security provision will also cover the researchers during this period." (Ref: Guide for Applicants, Marie Skłodowska-Curie Actions).

2. The Mobility Allowance: All eligible researchers recruited within an ETN/ITN are entitled to receive this allowance. It contributes to the expenses of the researcher caused by the mobility. The amount of the mobility allowance is specified in Table 3 of the MSCA Work Programme and for the calls 2014-2015 it amounts to €600 per month.” (Ref: Guide for Applicants, Marie Skłodowska-Curie Actions). According to the country-specific requirements this amount may be subject to taxation.

3. Family Allowance of €500 per month will be paid should the researcher be eligible for this allowance. See ** below.

** In this context, family is defined as persons linked to the researcher (i) by marriage, or (ii) a relationship with equivalent status to a marriage recognised by the legislation of the country where this relationship was formalised; or (iii) as dependent children who are actually being maintained by the researcher. The family status of a researcher will be determined at the time of their (first) recruitment in the project and will not evolve during the project lifetime.” (Ref: Guide for Applicants, Marie Skłodowska-Curie Actions).

In order to be eligible, each applicant must simultaneously fulfil the following criteria at the time of recruitment:

- **Mobility:** At the time of recruitment, the applicant must not have resided or carried out his/her main activity (work, studies, etc…) in the country of the host organization for more than 12 months in the 3 years immediately prior to his/her recruitment. Compulsory national service and/or short stays such as holidays are not taken into account.

- **Qualifications and research experience:** The applicant must fulfil the requirements defined for Early Stage Researchers (ESRs): ESRs are researcher who, at the time of recruitment, has **NOT yet been awarded the doctorate degree** and is in the first 4 years (full-time equivalent) of his/her research career.
